

FOR IMMEDIATE RELEASE

Neville Public Museum to Offer *EXTREME DEEP: Mission to the Abyss* Programming

Green Bay, WI---September 28, 2015---The Neville Public Museum is pleased to offer several programs in conjunction with our *EXTREME DEEP: Mission to the Abyss* exhibit. Programs are **FREE** and open to the public.

The following programs will be offered this fall:

Deep Water Archaeology

Tuesday, October 6, 6:00 p.m.

Learn how our state's underwater archaeologists work to uncover shipwreck mysteries that lie beneath Wisconsin's lakes and explore deep within the earth to document the state's submerged historic mining sites. Wisconsin remains at the forefront for development of imaging techniques for recording these time capsules of our past. Experience 3D imaging currently under development that will grant access to these sites and allow monitoring without getting wet!

Presented by: Tamara Thomsen, Maritime Archaeologist

The Great Lakes: Their Future – Our Responsibility

Tuesday, October 13, 6:00 p.m.

The Laurentian Great Lakes alone contain one-fifth of the world's supply of surface freshwater – the greatest single freshwater resource on the planet. Yet despite their size, these lakes are surprisingly fragile and are subject to a host of complex and interacting stresses. What is happening in the Great Lakes today and what does the future hold for them, and for us?

Presented by: J. Val Klump, JD, PhD, Director of Great Lakes WATER Institute

What Climate Change Means for the Great Lakes and What We Can Do About It

Tuesday, October 20, 6:00 p.m.

The Great Lakes region is experiencing warmer winters, wetter seasons and an increased risk of extreme weather events including floods and drought. Changes in the climate are having, and will continue to have, significant impacts on our water resources, forests, recreation, health, agriculture and coastal communities. What is being done to prepare and adapt to these changes? Wisconsin Sea Grant is working across the region to build sustainable and resilient coastal communities. Come learn about how climate may impact your community and what you can do to help.

Presented by: Julia Noordyk, Coastal Storms and Water Quality Specialist

Check our website, www.NevillePublicMuseum.org for more information about *EXTREME DEEP* and stay tuned for more programming announcements!
